DILUTION: Example

- There are a 1,000 total shares outstanding in ABC Company
- I buy 100 shares of ABC Company for \$25,000; I now own 10% of the company
- Company initiates an employee stock option program
- The program increases share count by 5% annually; as a result of the increase in total shares outstanding...
 - In 10 years my 100 shares is only 6.1% of the 1,629 total shares outstanding
 - In 20 years it is 3.8% of 2,653 total shares outstanding

Stock Options Today...

DILUTION: Example (continued)

- **My return as a shareholder is reduced dramatically as a result of the employee option dilution**
- **If the value of the company doubles in 10 years:**
 - If no employee options were granted my holdings would be worth \$50,000 (\$25,000-initial investment X 2)
 - With option dilution, my ownership in the company has decreased from 10% to 6.1%. My \$25,000 investment is now worth \$30,500, versus \$50,000
 - The difference, \$19,500, went to employees.

**Impact of dilution on
shareholder value is significant**
